Re: To trade gold copper alloy and silver by Metric weight

-----

The law on weight and measure section set to use weighting section by metric system. Which unit of quantity shall be kilogrammes. Divide section larger shall be Metric quintal Metrictonne and divide section smaller shall be Hectograme, Decagrame, grame, Decigrame, Centigrame, Milligrame and Micrograme. Besides Ministry of Commerce promulgation on 30 September 1975. Specific goods for trading of many other types use weighting section or measure by metric system. Then all the weighing machine that are used to weighting or trading nowadays are metric section. No weighing machine with unit of gold's weight, bath, weight of silver. But it appears for trading gold copper alloy and silver in the general also determine the weight of trading in the unit of gold's weight, bath, weight of silver. And the gold price is still using the weight unit is bath which is not correct.

Department of Internal so warns those involved in price announcements and seller gold copper alloy and silver to do price announcements or trading gold bar gold ornament copper alloy and silver by Metric weight be correct Weights and measures Act B.E. 2466 (1923) such as prices are in grame or fifty grames each etc.

Please be informed accordingly

Given on the 11<sup>th</sup> Day of November B.E. 2518
