

NOTIFICATION OF THE DEPARTMENT OF COMMERCE REGISTRATION

RE: INSPECTION AND VERIFICATION OF A FUEL DISPENSER

FOR THE TYPE CONTAINING ONLY NUMBERS DISPLAYING THE AMOUNT OF FUEL

(FLOW METER)

---

Since a fuel dispenser for the type containing only numbers displaying the amount of fuel in liter (flow meter) which weighing and measuring instruments competent official has examined correctly and affixed a verification mark and modified a hand fuel pump as a device in putting pressure for delivering fuel through a flow meter, this hand device will pump fuel through a flow meter periodically and not continuously resulting in a gap between each period and creating air or wind entering into a flow meter while pumping the fuel resulting in a number of flow meter to move to the same spot as the point where the fuel flows through. Therefore, the real amount of fuel is less than the amount displayed in the flow meter resulting in a seller being at advantage from purchaser by type of flow meter.

Thus, in order to prevent any person from using this flow meter to take advantage of the public by such mentioned method, the Department of Commerce Registration hereby prescribes the procedures for inspection and verification of this type of flow meter as follows:

1. a competent official shall inspect and verify only if a flow meter is stalled at a place of installment by which such meter may use whatever means to pump the fuel but shall ensure that there is no air in the flow meter while pumping the fuel through flow meter;
2. inspection and verification shall be followed in the same manner as the inspection and verification of a petrol pump.

This shall come into force as from now.

Given on the 18<sup>th</sup> of August B.E. 2519

Signed Chai Nithiprapa

Mr. Chai Nithiprapa

Director-General of the Department of Commerce Registration
